1. Introduction
2. Task 1: Infographic
3. Task 2: Digital Portfolio
4. Task 3: Coding & Collaboration Platforms
5. Task 4: Email Etiquette
6. Task 5: Cybercrime Awareness
7. Conclusion
8. References

# 1. Introduction

Digital literacy is a crucial skill in the modern, technology-driven era. It includes the ability to use digital tools efficiently, communicate appropriately online, and ensure safe internet usage.

This project was designed to strengthen my understanding of various digital platforms and responsible digital behavior.

Throughout this project, I explored areas such as infographic creation, digital profile development, coding practice, professional email writing, and cyber safety. It enhanced my practical knowledge and boosted my confidence in using digital tools effectively.

## 2. Task 1: Infographic

For this task, I designed a digital literacy infographic using Canva.

The infographic focused on key aspects like safe internet usage, important digital tools, and maintaining a professional online identity.

I structured the content into four sections to improve clarity and visual appeal. This activity helped me understand how to present information in a creative and organized manner.

## 3. Task 2: Digital Portfolio

In this task, I created and updated my profiles on platforms such as GitHub, LinkedIn, and HackerRank.

GitHub is useful for managing coding projects, LinkedIn supports professional networking, and HackerRank helps in improving coding skills.

These platforms play a vital role in building a strong online presence. I plan to continue updating my profiles and adding projects to enhance my technical expertise.

## 4. Task 3: Coding & Collaboration Platforms

During this task, I solved a beginner-level problem, 'Solve Me First', on HackerRank, which helped me develop basic programming logic and problem-solving skills.

Additionally, I created a Google Forms quiz on digital literacy, including questions related to online safety and behavior.

This task demonstrated how digital tools can be effectively used for collaboration and interactive learning.

## 5. Task 4: Email Etiquette

In this section, I learned how to compose professional emails.

I drafted an email requesting an assignment extension and another applying for an internship opportunity.

I also prepared a checklist outlining the do’s and don’ts of social media usage.

This task highlighted the importance of clear and professional communication in academic and workplace environments.

## 6. Task 5: Cybercrime Awareness

In this task, I studied UPI fraud, a commonly occurring cybercrime.

I learned about the techniques used by fraudsters to obtain sensitive information such as OTPs.

I also created a checklist of preventive measures to ensure online safety.

This activity increased my awareness of digital threats and emphasized the importance of cybersecurity.

.

## 7. Conclusion

This project significantly improved my understanding of digital literacy and its relevance in everyday life.

I gained valuable knowledge about using digital tools, maintaining professional communication, and ensuring online safety.

Overall, this project enhanced both my technical and communication skills and will be beneficial for my future academic and professional growth
